                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 2, Application US/09060854B
Patent No. US20020081703A1
GENERAL INFORMATION:
APPLICANT: Estell, David Aaron
TITLE OF INVENTION: Human Protease and Use of Such Protease for Pharmaceutical
TITLE OF INVENTION: Applications and for Reducing the Allergenicity of No. US2002008
TITLE OF INVENTION: Proteins
FILE REFERENCE: GC532
CURRENT APPLICATION NUMBER: US/09/060,854B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TGGCCACTGAGGGTAGGGTGTGGAGGCCCCCTGAGGAGCTGCGCGGCCCAG 1076
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             958 ATTCTGCCGAGCCTATTGTCCCTACCCTGCTCTGCTGCATGGGGCCCCATGGCTTTG-GC 1016

Title: Perfect score: Sequence:

US-09-490-291-4 3493 1 MRGSHHHHHHGSMASGRGGL......GGYGPGQQTSGIRRPAAKLN 681

Scoring table:

BLOSUM62 Gapop 10.0 , Gapext 0.5

112892 Total number of hits satisfying chosen parameters:

112892 seqs, 41476328 residues

Searched:

Minimum DB seq length: 0 Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

SwissProt_40:* Database : Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-1- DOMAIN: COMPOSED OF ANTIPARALLEL BETA SHEETS. THE STRANDS OF THE BETA SHEETS. THE STRANDS OF SILK FIBROIN ARE COMPOSED OF MICROCRYSTALLINE ARRAYS OF (-GILY-SER-GLY-ALA-GLY-ALA-)N INTERRUPTED BY REGIONS CONTAINING BULKIER RESIDUES. THE FIBER IS COMPOSED OF MICROCRYSTALLINE ARRAYS ALTERNATING WITH AMORPHOUS REGIONS.
